

LAB-2

Aim:
To demonstrate Web server and DNS setup

Devices used:
Switch, PC, Server

Topology:

Procedure:

- (i) Create the above topology using PC, Switch and Server.
- (ii) Set the IP addresses of PC as shown above.
- (iii) To set IP address of server, go to server configuration, select static method, set IP address and make sure port status is on.
- (iv) Ping server from PC
(ping is successful, 0% loss)

- (i) Now go to PC \rightarrow Desktop \rightarrow web browser
- (ii) In the address bar enter the ip address of the server and click
- (iii) The web page is visible

Observation:

- Successfully accessed server's web page from PC (web browser) by entering ip address
- Created a simple LAN with PC, server and switch
